

PB703

Mini Asset Tag

The PB703 is an asset tracking device that can be used to prevent valuable items from being stolen. It uses a crowdsourced network to determine location, eliminating the need for a SIM card to obtain accurate location data worldwide. The device comes with a 3M double-sided adhesive tape, so you can attach it inside a car, suitcase, or any place you want. In addition, the PB703 has a low power mode that allows it to run on the internal battery for up to 30 months. Finally, its small form factor allows you to place it discreetly in any desirable place.

Low Power Consumption

The internal battery can power the device to operate as long as 30 months.

Global Availability

The device can be used anywhere in the world because it doesn't depend on cellular networks for communication and the different frequency bands are no longer a problem.

Wide Operating Temperature

The device can operate correctly between -20°C and +70°C.

Flexible Installation

The device can be installed via a 3M double-sided adhesive tape or just squeeze it into your valuables, making it suitable for various scenarios.

Geofence Alert

A virtual boundary can be set on the platform, you'll be notified when an asset under tracking leaves or enters the boundary.

Applications

Suitcase Tracking

Asset Tracking

Auto Finance

Parameters

Battery	1100mAh Li-MnO ₂ Battery
Switch	Toggle switch
Dimensions	48x 38 x 13.7mm
Color	Black
Operating temperature	-20°C to +60°C
Buzzer	70dB
IP Rating	IP54
Device weight	39g
